

PLASTERBOARD CARRIER

VIPP

The panel carrier is designed to facilitate the handling and transport of large panels and boards on construction sites, workshops and installation jobs. It allows drywall sheets, wooden panels, metal sheets and similar materials to be moved in a safer and more ergonomic way. The functional design helps distribute the load weight and reduce physical strain during transport. The robust structure ensures stability and durability during use, allowing panels to be lifted and moved with greater control. The support system keeps the material stable during handling. A practical tool for construction professionals, drywall installers, carpenters and assembly work.

Key features

- > Suitable for transporting large panels
- > Ideal for drywall, wood and metal sheets
- > Facilitates panel handling and movement
- > Ergonomic design reduces physical strain
- > Robust structure for professional use
- > Improves safety during panel transport

Specifications

Capacity

80 Kg

Size

165 x 70 x 360mm
